CNA Final Assessment - 1일차

<u>≔</u> Tags	2020 DT 교육
♥ 상태	완료
를 시작	@Aug 31, 2020
를 종료	@Aug 31, 2020

1일차

- 1. 바로 잡습니다.
 - 1. CQRS는 서비스 내에 구현하면 ID가 중복 생성되므로, ContextBoundary 밖에 별도의 서비스로 구현 해야함
 - BookingList 관련 클래스는 모두 삭제한 후 commit 했음
 - 2. 각 이벤트에 메시지 퍼블리싱 기능이 내장이 되어 있어, 추가로 코딩한 부분에서 메시지를 중복 퍼블리싱함... 해당 코드들을 전부 삭제함

```
Booking.java × AbstractEvent.java
st case.txt 

                                               application.yml
                                                               Terminal 9
            macuei accavatac (sci acegy-acuei actourype. Horo)

            @PostPersist
            public void onPostPersist(){
  20
                BookingCreated bookingCreated = new BookingCreated();
                // 속성값 할당
                BeanUtils.copyProperties(this, bookingCreated);
                bookingCreated.publishAfterCommit();
  26
  27
            @PostUpdate
            public void onPostUpdate(){
                // 이벤트 인스턴스 생성
                BookingChanged bookingChanged = new BookingChanged();
                // 속성값 할댕
                BeanUtils.copyProperties(this, bookingChanged);
                bookingChanged.publishAfterCommit();
```

• 위 빨간색 표시한 부분이 kafka에 메시지를 발행

• AbstractEvent 클래스의 publish 내에 메시지 생성 로직이 들어 있음

2. 추가 작업 내역

1. EKS 클러스터(TeamE)에 Kafka 설치 완료

```
Every 2.0s: kubectl get all -n kafka
                                                STATUS
                                               Running
Running

```

- EKS의 역할에 CodeBuild 서비스 역할 추가
 - EKS의 ConfigMap 다운로드

- kubectl get configmaps aws-auth -n kube-system -o yaml
 aws-auth.yml
- ConfigMap 에 CodeBuild 서비스 역할 추가

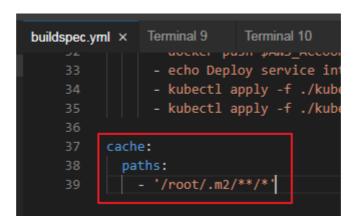

```
aws-authyml x commands tot buildspec.yml Terminal 9 Terminal 10 Terminal 11

```

• EKS에 변경된 ConfigMap 적용

```
root@labs--1475502367:~/cna-booking/kubernetes# kubectl apply -f aws-auth.yml --force
Warning: kubectl apply should be used on resource created by either kubectl create --save-conf
ig or kubectl apply
configmap/aws-auth configured
```

- kubectl apply -f aws-auth.yml --force
- 5. CodeBuild 성능 향상을 위한 캐시 추가
 - buildspec.yml 에 cache 설정을 해 줌

• 캐시 설정을 하여 빌드에 필요한 dependency 들을 매번 다운로드 하지 않고 S3 버킷에 저장해 둘 수 있음

캐싱 이후 빌드 속도가 현저히 빨라짐을 확인할 수 있음: 4분 59초 → 1분
 40초
